

Reliable Pesttech
We Assure You Results

We Are
Reliable And Reasonable
A Licensed Pest Control Company

A Complete
Pest Management Company
www.reliablepesttech.com

Reliable Pestech, a company specialised in Pest Control, Environmental Health & Hygiene Services, combining the following fields:

The chemistry of pesticides,
The biology of the species of vermin.

We bring these specialist areas of knowledge together to provide a scientifically-planned system of protection from vermin. Safety is of critical importance in every unit of work! Unless control measures guarantee the safety of food, occupants, and the environment they may only deceive the people concerned into thinking they have taken effective and proper action. This danger is even more dangerous because it cannot be felt or seen!!

Why choose Reliable Pestech?

- We are licensed pest control operator. (Registration No - PE19-20224891)
- License No - JDA/BU/PL/PE19-20224891
- Vast experience in the field of Pest Management

Member of Karnataka Pest Management Association.

POLTI CIMEX ERADICATOR®
THE ALL-NATURAL, ULTIMATE
BED BUGS SOLUTION

- ✓ POLTI'S PATENT SUPERHEATED DRY SATURATED STEAM UP TO 180°C
- ✓ IT CAN BE USED IN THE PRESENCE OF PEOPLE
- ✓ 100% EFFECTIVE**
- ✓ REMOVES BED BUG ODOUR
- ✓ WITHOUT USE OF INSECTICIDES
- ✓ SUITABLE FOR ALL SURFACES, EVEN FABRICS

SDD
STEAM DISINFECTION DEVICE*
(ref. AFNOR NF T72-110)
MADE IN ITALY

Pest Facts

Potential harm from Cockroach:

Even though cockroaches are very common in Indian cities, the risk that a cockroach infestation poses is often underestimated. Cockroaches spread diseases such as Salmonella Food Poisoning, Gastroenteritis, Diphtheria, Dysentery, Typhoid and Hepatitis. Cockroaches have been identified as a major source of powerful allergens, often the cause of asthma and allergies, especially in urban areas. Damage goods, books, leather and etc. In fact there is hardly anything that cockroaches will not eat.

Potential harm from Bandicoot (Rats):

Bandicoot rats are known to spread infections such as Salmonella, Hantavirus and Leptospirosis. Damage to stock and buildings. rodents sharp teeth can gnaw through cables, plastic, wooden doors and even mild steel. Warehouses and silos may subside or collapse as a result of being undermined by the burrowing activities of these rodents. Contamination of foodstuffs and goods. On the rodents underside, wet fur soaked in urine can transmit diseases to work surfaces, table tops or anywhere the rodent has climbed.

Potential harm from Housefly:

House flies are strongly suspected of transmitting at least 65 diseases to humans, including typhoid fever, dysentery, cholera, poliomyelitis, yaws, anthrax, tularemia, leprosy, and tuberculosis.

Potential harm from Mosquitoes:

If there is large numbers of mosquitoes, for example near stagnant water bodies and drains, mosquitoes can become a nuisance and cause distress to everybody in that area. Mosquitoes in India can transmit many dangerous and potentially fatal diseases, such as Dengue, Chikungunya, Malaria, Japanese B Encephalitis, Zika and West Nile virus, which can lead to disabling and potentially deadly effects (such as encephalitis, meningitis and microcephaly)..

Potential harm from Ant:

Infest and contaminate foodstuffs. Due to their small size they often manage to enter sterile areas and packaging, thus causing contamination. Can invade anything and everything. Mechanical vectors for diseases, such as Salmonellosis. Especially in hospitals there is a strong risk of bacteria and viruses being mechanically spread by ants.

Potential harm from Termite:

Formosan termites are often called "super termites." These wood boring terrors are the most destructive and aggressive termites you can run into, and they have the largest colony size of any other species. Expensive timber damage and repair costs. Termites can be hard to detect and can gain entry to homes, building and structures via underground tunnels originating from the nest (which can be up to 100m away).

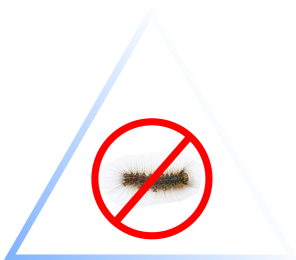

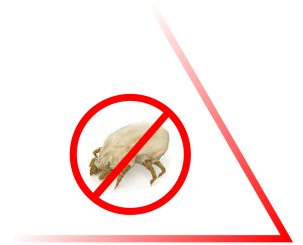

Potential harm from BedBug:

Bed bugs are not known to spread disease. Bed bugs can be an annoyance because their presence may cause itching and loss of sleep. Sometimes the itching can lead to excessive scratching that can sometimes increase the chance of a secondary skin infection.

Potential harm from Dust Mites:

A mild case may cause an occasional runny nose, watery eyes and sneezing. In severe cases, the condition is ongoing, resulting in persistent sneezing, cough, congestion, facial pressure or even a severe asthma attack. People with asthma who are sensitive to dust mites face an increased risk of asthma attacks.

Potential harm from Gypsy Moth Caterpillar:

Gypsy moth caterpillars' damage can be extensive when population densities are high, and it is most severe on small trees. A host plant will usually recover after an infestation without its vigour being affected. However, repeated infestations can negatively impact the plant's long-term health, and can eventually lead to tree death.

Services offered:

- ▲ Pest control (Chemical & Non Chemical)
- ▲ Termite control with minimum five years guarantee
- ▲ Pre & post construction inspection & audits
- ▲ Develop pest management & hygiene standards
- ▲ Detailed pictorial reports and trend analysis
- ▲ Pest awareness education and training
